JOB AND CAREER

- > **A job is something you do simply to earn money; a career is a series of connected employment opportunities.**
- > **A job has minimal impact on your future work life, while a career provides experience and learning to fuel your future.**
- > **A job offers few networking opportunities, but a career is loaded with them.**
- > **When you work at a job, you should do the minimum without annoying the boss. When you're in a career, you should go the extra mile, doing tasks beyond your minimum job description.**

Paragraph Drawing

Cyber Security Challenges

- Cyberspace has inherent vulnerabilities that cannot be removed
- Innumerable entry points to internet.
- Assigning attribution: Internet technology makes it relatively easy to misdirect attribution to other parties
- Computer Network Defense techniques, tactics and practices largely protect individual systems and networks rather than critical operations (missions)
- Attack technology outpacing defense technology
- Nation states, non-state actors, and individuals at peer level, all capable of waging attacks
